

## SOLAR DUMP CONTROLLER

The Solar Dump Controller is designed to eliminate the use of fuel gas to operate a dump valve on a separator package.

### The Solar Dump Controller Has Many Advantages

- Easily installed
- Eliminates venting gasses into atmosphere
- Works with low pressure wells
- A cost effective solution for your separator controller needs

12 volt DC Valve Actuator

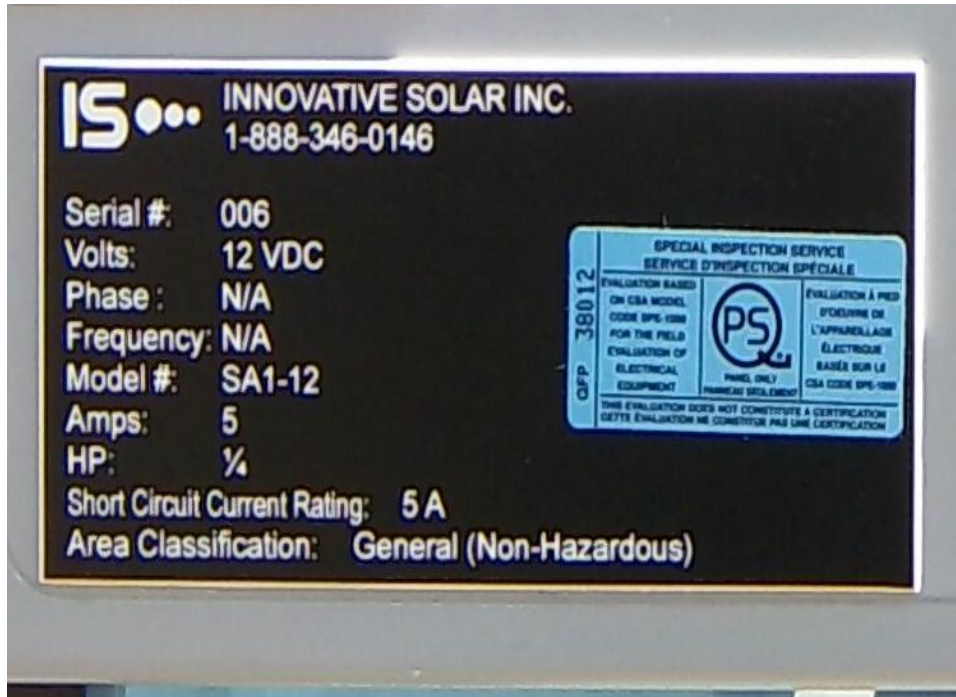

Electric Level Displacer

Low Pressure systems can have difficulty operating classic pressure level switches. The Solar Dump Controller operates an electric motorized dump valve when signalled by the electric separator level switch.

The Solar Dump Controller is mounted outside of the separator shack. The connector cables go through 10 feet of cable tray. This moves the controller out of the hazardous location around the shack.

**Strides in new technologies have made the newly designed Solar Dump Controller more practical and cost effective.**

**THIS PRODUCT MEETS ALL CSA AND INDUSTRY REQUIREMENTS**
